

Spray Products and Spray System

For professional use in preserving single items

Bookkeeper is a breakthrough deacidification process that safely neutralizes acids and extends the lifespan of paper at least three to five times longer than untreated material.

Independent tests conducted by leading research laboratories have verified the safety and effectiveness of the Bookkeeper process. Tests show that the buffering agent is evenly distributed throughout a sheet of paper, has no effect on the integrity of inks and does not damage adhesives or binding fabrics.

Bookkeeper Spray Products are available in:

- 150g non-aerosol, refillable bottle; treats approximately 2 square meters
- 900g refill bottle; treats approximately 12 square meters

Bookkeeper spray products can safely preserve manuscripts, documents, clippings, maps, posters and other paper-based materials contained in modern libraries and archival collections.

The Bookkeeper spray system is ideal for use on materials with larger surface areas.

The Bookkeeper Spray System consists of a 7.5 liter pressurized tank, spray nozzle and air compressor. It is ideal for use on materials with larger surface areas. Bookkeeper refills area available in a 5.67kg container. The system is easy-to-use and is an economical way to treat oversized documents, maps and collections containing a large amount of individual documents.

All Bookkeeper products are non-toxic, non-hazardous, contain no CFC's and no solvents. The products are non-clogging, virtually odor-free and dry in minutes.
